hp12c Classic Business and Financial Calculator Simulation version 4.2
Release Notes

Thank you very much for your interest in RLM Software's hp12c Classic Business and Financial calculator simulation version 4.2. The hp12c Classic simulation has all the functions and capabilities of the real calculators, plus the following extended features :
- 100 memory registers.
- 1000 program steps.
- Interface engraving tool and preferences menu
- Preferences menu to set the main settings.
- Variable view size.
- Paper tape output.
- Register's content tool.
- Cash Flow tool.
- Statistical analysis tool.
- Time value of money tool.
- On-line Currency conversion tool by www.xe.com.
- Programs Explorer tool.
- Sound and spoken feedback settings
- CLX or DEL, settings.
- Program line insert or replace mode setting
- Save and load programs.
- Save and Load memory sets.

IMPORTANT NOTES :
- **Because the simulator has 100 memory registers all memory operations require two digits to finish the sequence. For example, to store the displayed number in the register 8, press "STO 0 8".**
- **Because the 1000 program steps, the "GTO" command needs three digits to completion**
